

GiftSense

Confidence Engine

for Thoughtful

Gifting

The problem: **86% of gifters** worry their gift won't reflect how well they know the recipient.

The solution: Turn relationship knowledge into gift conviction – no product picking, no marketplace, just clarity on what kind of gift fits this person and why.

Built on research. Validated with users. Ready to scale.

Gift Anxiety Is Real

The core problem isn't product discovery. It's social risk. 86% of gifters worry: *"What if this gift makes me look like I don't really know them?"* Early research (n=7 in-depth interviews) revealed this consistent pattern across all respondents.
Next: Quantitative validation with n=200 to confirm market size and willingness-to-pay.

Primary Persona

The Overthinking Gifter

Working professionals 25-36 who gift to close friends.

Budget: ₹1,500-3,000.

Core Fear: "This gift will make me look like I don't really know them."

Behavior

Researches heavily, delays final decision, defaults to safe options, and asks friends for validation.

Unmet Need

A structured way to translate personal knowledge into confident gift direction.

Competitive Landscape

Every Existing Tool Solves Discovery, Not Decision Confidence

The market is full of gifting tools. But none address the moment of peak anxiety: *"Is this the right gift for THIS person?"* They optimize for browsing. We optimize for deciding.

Tool	What It Does	What It Misses
Amazon / Flipkart	Massive product catalogs with filters and reviews	Zero emotional or relationship context
Giftster	Wishlist sharing between recipient and gifter	Requires recipient participation – useless for surprises
ChatGPT	General AI gift idea generation on request	No relationship depth, no confidence scoring, no rationale
Pinterest	Visual inspiration and mood boarding	Inspiration only – no path from idea to decision
GiftSense	Relationship-aware AI confidence engine	Fills the gap – confidence + rationale + decision

Why GiftSense Wins: The Confidence Moat

Existing tools solve "What product exists?" We solve "Is this the RIGHT gift for THIS person?"

Our Unfair Advantages:

Relationship Intelligence

Only tool that captures relationship depth. Competitors can't replicate without user data.

Confidence Scoring

Every direction comes with a % and WHY. Users get conviction, not suggestions.

Platform Agnostic

We sell clarity, not products. Users shop anywhere. Zero inventory risk.

Habit Loop

Gifting occasions recur. Saved profiles create switching costs.

Why This

Moat:

Amazon/Flipkart

Can't build relationship context.

ChatGPT

No relationship depth or memory.

Giftster

Requires recipient participation.

Pinterest

Inspiration only, no decision path.

GiftSense owns the decision moment. That's where the value is.

MVP Scope

Recipient Profile + AI Rationale Card — Everything Else Is V2

Three core features:

1 Recipient Profile Builder

Captures personality, interests, past gifts, and relationship

2 AI Gift Direction Engine

Generates 3 ranked directions with confidence scores.

3 Rationale Cards

Explains **WHY** each direction fits.

- 📄 **Why this scope?** Scope discipline is a feature. We solve ONE problem exceptionally well before expanding. Feature creep kills focus.

How It Works

Context In. Direction Out. Rationale to Decide.

Three steps:

1. User provides occasion, relationship, personality, interests, past gifts, budget.
2. AI generates 3 directions ranked by confidence fit.
3. User sees directions with % and rationale explaining WHY each fits.

GiftSense doesn't pick a product – it builds conviction. You know what kind of gift fits this person and why. Then you shop anywhere, buy with confidence.

Success Metrics

North Star: Gift Confidence Score Improvement Every Session

Leading Indicators (Does the product work?)

- Session-to-purchase conversion $\geq 40\%$ – users who purchase within 2 weeks.
- Direction satisfaction $\geq 75\%$ – users rate direction as “fits well.”
- D7 return rate $\geq 25\%$ – users return within 7 days.

Lagging Indicators (Is the business sustainable?)

D30 Retention
 $\geq 35\%$

Habit formation

NPS ≥ 40

Would recommend

Pro Conversion
 $\geq 15\%$

Monetization

These metrics gate every decision.

Critical Risks & Mitigations: What Could Kill This

Risk 1 – Cold Start: Users won't fill out profiles. **Mitigation:** Smart defaults + guided onboarding. **Target:** 70% completion.

Risk 2 – Retention Cliff: Users don't return after first session. **Mitigation:** Occasion reminders + gift memory log. **Target:** D30 retention $\geq 35\%$.

Risk 3 – Monetization: Users won't pay ₹199/mo. **Mitigation:** Validate pricing in Phase 2 survey. **Target:** Pro conversion $\geq 15\%$.

Gate System: Each phase has clear go/no-go criteria. If metrics miss, we pivot or shut down.
